

Chapter 2 Section 3

Andrew Taylor

April 11 2022

Problem 1. *Calculate the matrix product*

$$\begin{bmatrix} 6 & 7 \\ 8 & 9 \end{bmatrix} \begin{bmatrix} 1 & 2 \\ 3 & 5 \end{bmatrix}$$

Solution.

$$\begin{aligned} \begin{bmatrix} 6 & 7 \\ 8 & 9 \end{bmatrix} \begin{bmatrix} 1 & 2 \\ 3 & 5 \end{bmatrix} &= \begin{bmatrix} 6 * 1 + 7 * 3 & 6 * 2 + 7 * 5 \\ 8 * 1 + 9 * 3 & 8 * 2 + 9 * 5 \end{bmatrix} \\ &= \begin{bmatrix} 27 & 47 \\ 35 & 61 \end{bmatrix} \end{aligned}$$

Problem 2. *Compute the products BA and AB for*

$$A = \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}$$

$$B = \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix}$$

Interpret your answers geometrically, as composites of linear transformation.

Solution. Let $T_A(\vec{x}) = A\vec{x}$ and $T_B(\vec{y}) = B\vec{y}$. We can write

$$\begin{aligned} A &= \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} = [T_A(e_1) \quad T_A(e_2)] \\ B &= \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix} = [T_B(e_1) \quad T_B(e_2)] \end{aligned}$$

Thus

$$\begin{aligned} T_A(\vec{e}_1) &= \begin{bmatrix} 0 \\ 1 \end{bmatrix}, T_A(\vec{e}_2) = \begin{bmatrix} 1 \\ 0 \end{bmatrix} \\ T_B(\vec{e}_1) &= \begin{bmatrix} -1 \\ 0 \end{bmatrix}, T_B(\vec{e}_2) = \begin{bmatrix} 0 \\ 1 \end{bmatrix} \end{aligned}$$

We see that T_A is a reflection about the line $y = x$. In other words, T_A is a reflection about the line spanned by the vector $\vec{w} = \begin{bmatrix} 1 \\ 1 \end{bmatrix}$.

We see that T_B is a reflection about the line $x = 0$. In other words, T_B is a reflection about the line spanned by the vector $\vec{w} = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$.

Now let's compute the products BA and AB .

$$\begin{aligned} BA &= \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix} \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} \\ &= \begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix} \end{aligned}$$

The product BA is a rotation matrix that rotates a vector ninety degrees counterclockwise.

$$\begin{aligned} AB &= \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix} \\ &= \begin{bmatrix} 0 & 1 \\ -1 & 0 \end{bmatrix} \end{aligned}$$

The product AB is a rotation matrix that rotates a vector ninety degrees clockwise.
