

## Chapter 2 Section 2

Andrew Taylor

April 6 2022

The letter L can be represented by the vectors  $(0, 2)$  and  $(1, 0)$ .

The following problems ask for a linear transformation of the letter L. In the following problems, give the matrix of the transformation and plot the result.

**Problem 1.** Scale  $L$  by a factor of  $\frac{1}{2}$

**Solution.** The matrix of the transformation is

$$\begin{bmatrix} 0.5 & 0.0 \\ 0.0 & 0.5 \end{bmatrix}$$

*After the scaling, the  $L$  looks like this*

*Note that in creating this shape, we scaled both vectors that make up the L.*

**Problem 2.** *Rotate L ninety degrees counterclockwise*

**Solution.** *The matrix of the transformation is*

$$\begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix}$$

*After the rotation, the L looks like this*
